Foreword

This report was made at Aalborg University in the first semester of the Software Candidate study by the group sw707e14. The report was made as a part of the P7 project in the period 3-9-2014 to 19-12-2014. We discussed the current system with Aalborg Kommune, whose co-operation was helpful. The project was supervised by Hua Lu, whose supervision was much appreciated.
